BASIC BUILDING BLOCKS

www.basicbb.com

Anton Popov: «Historically we think about a house or building as real-estate, something for ages, immovable. On one hand, it is true, but on the other life becomes more dynamic, faster, wider, juicy. Especially for active people. And in the nearest future new reality will come to some of us in respect of housing and our attitude to it. Cars are almost there, in a few years you will not own a car anymore, you will buy an unmanned automated service to move from A to B.

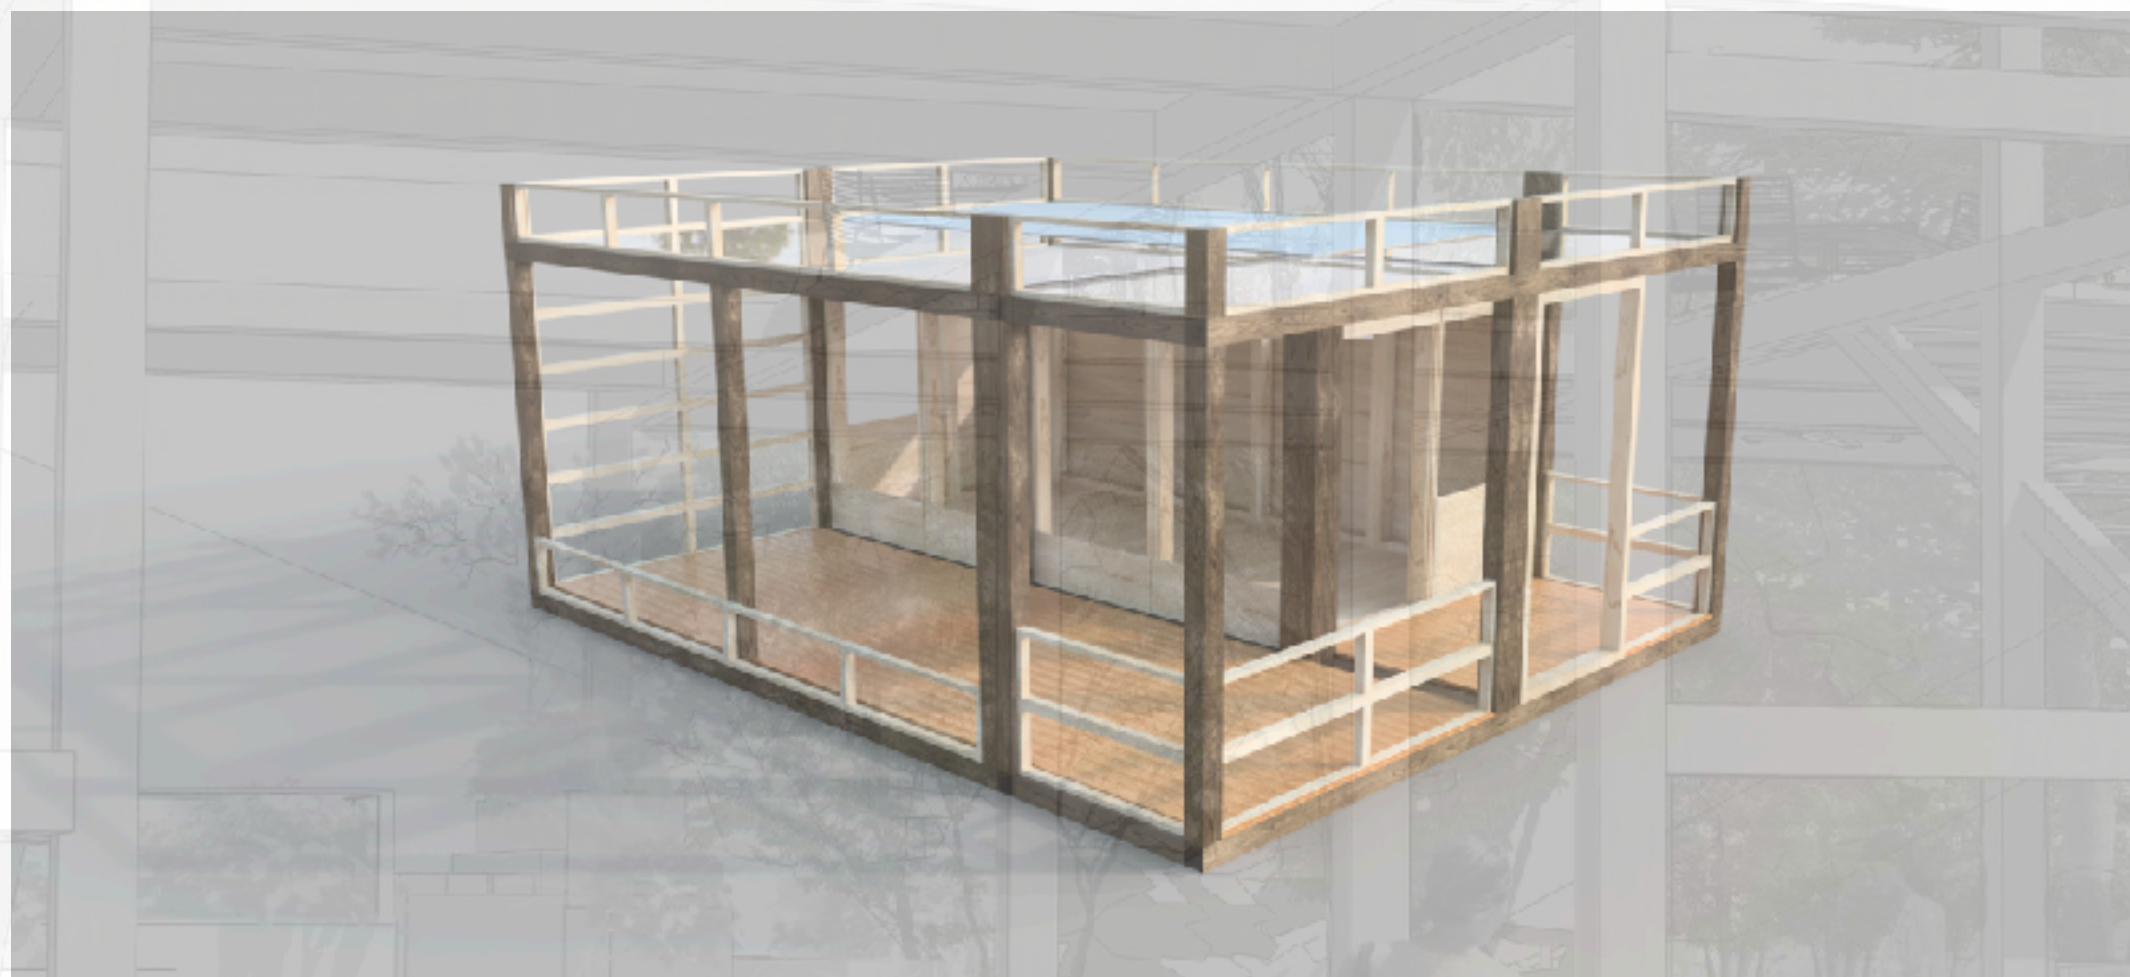

BBB philosophy and technology bring you to the future of housing which fits any lifestyle and business needs. Any size any shape from a single house to a settlement in a few days! Actually we are bridging to
Dynamic housing solutions.

Just imagine that you could build a township in few weeks but also you could move or relocate it or store or even sell it out keeping the value with no harm to the environment!»

Anton Popov

About BBB

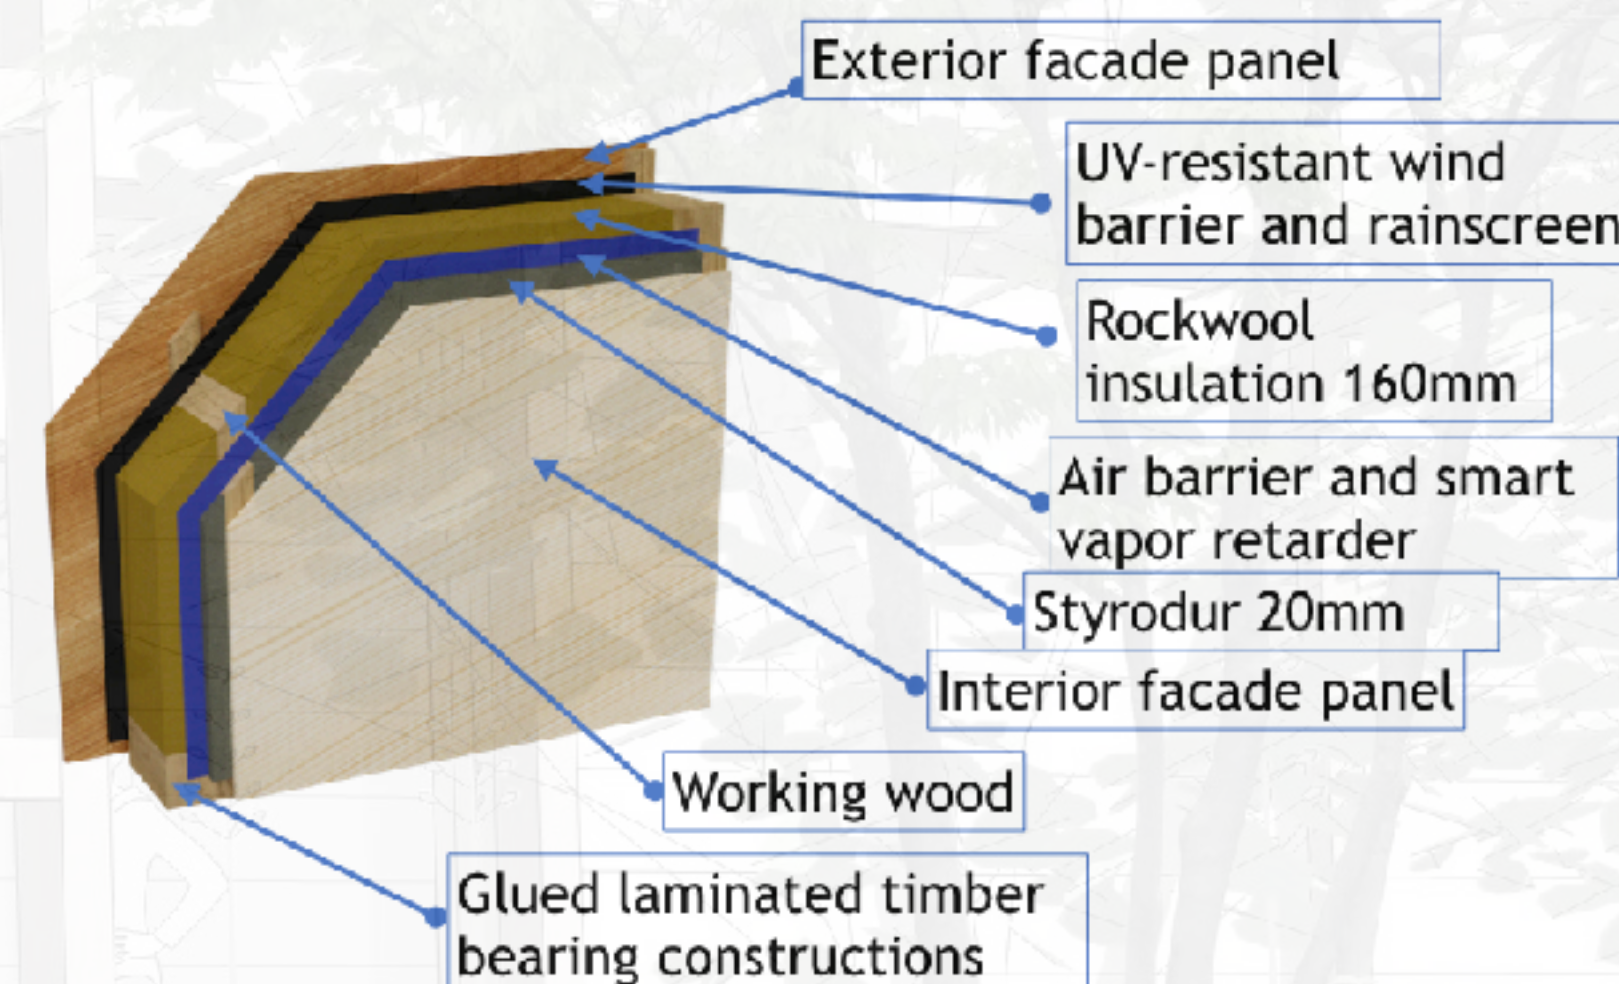

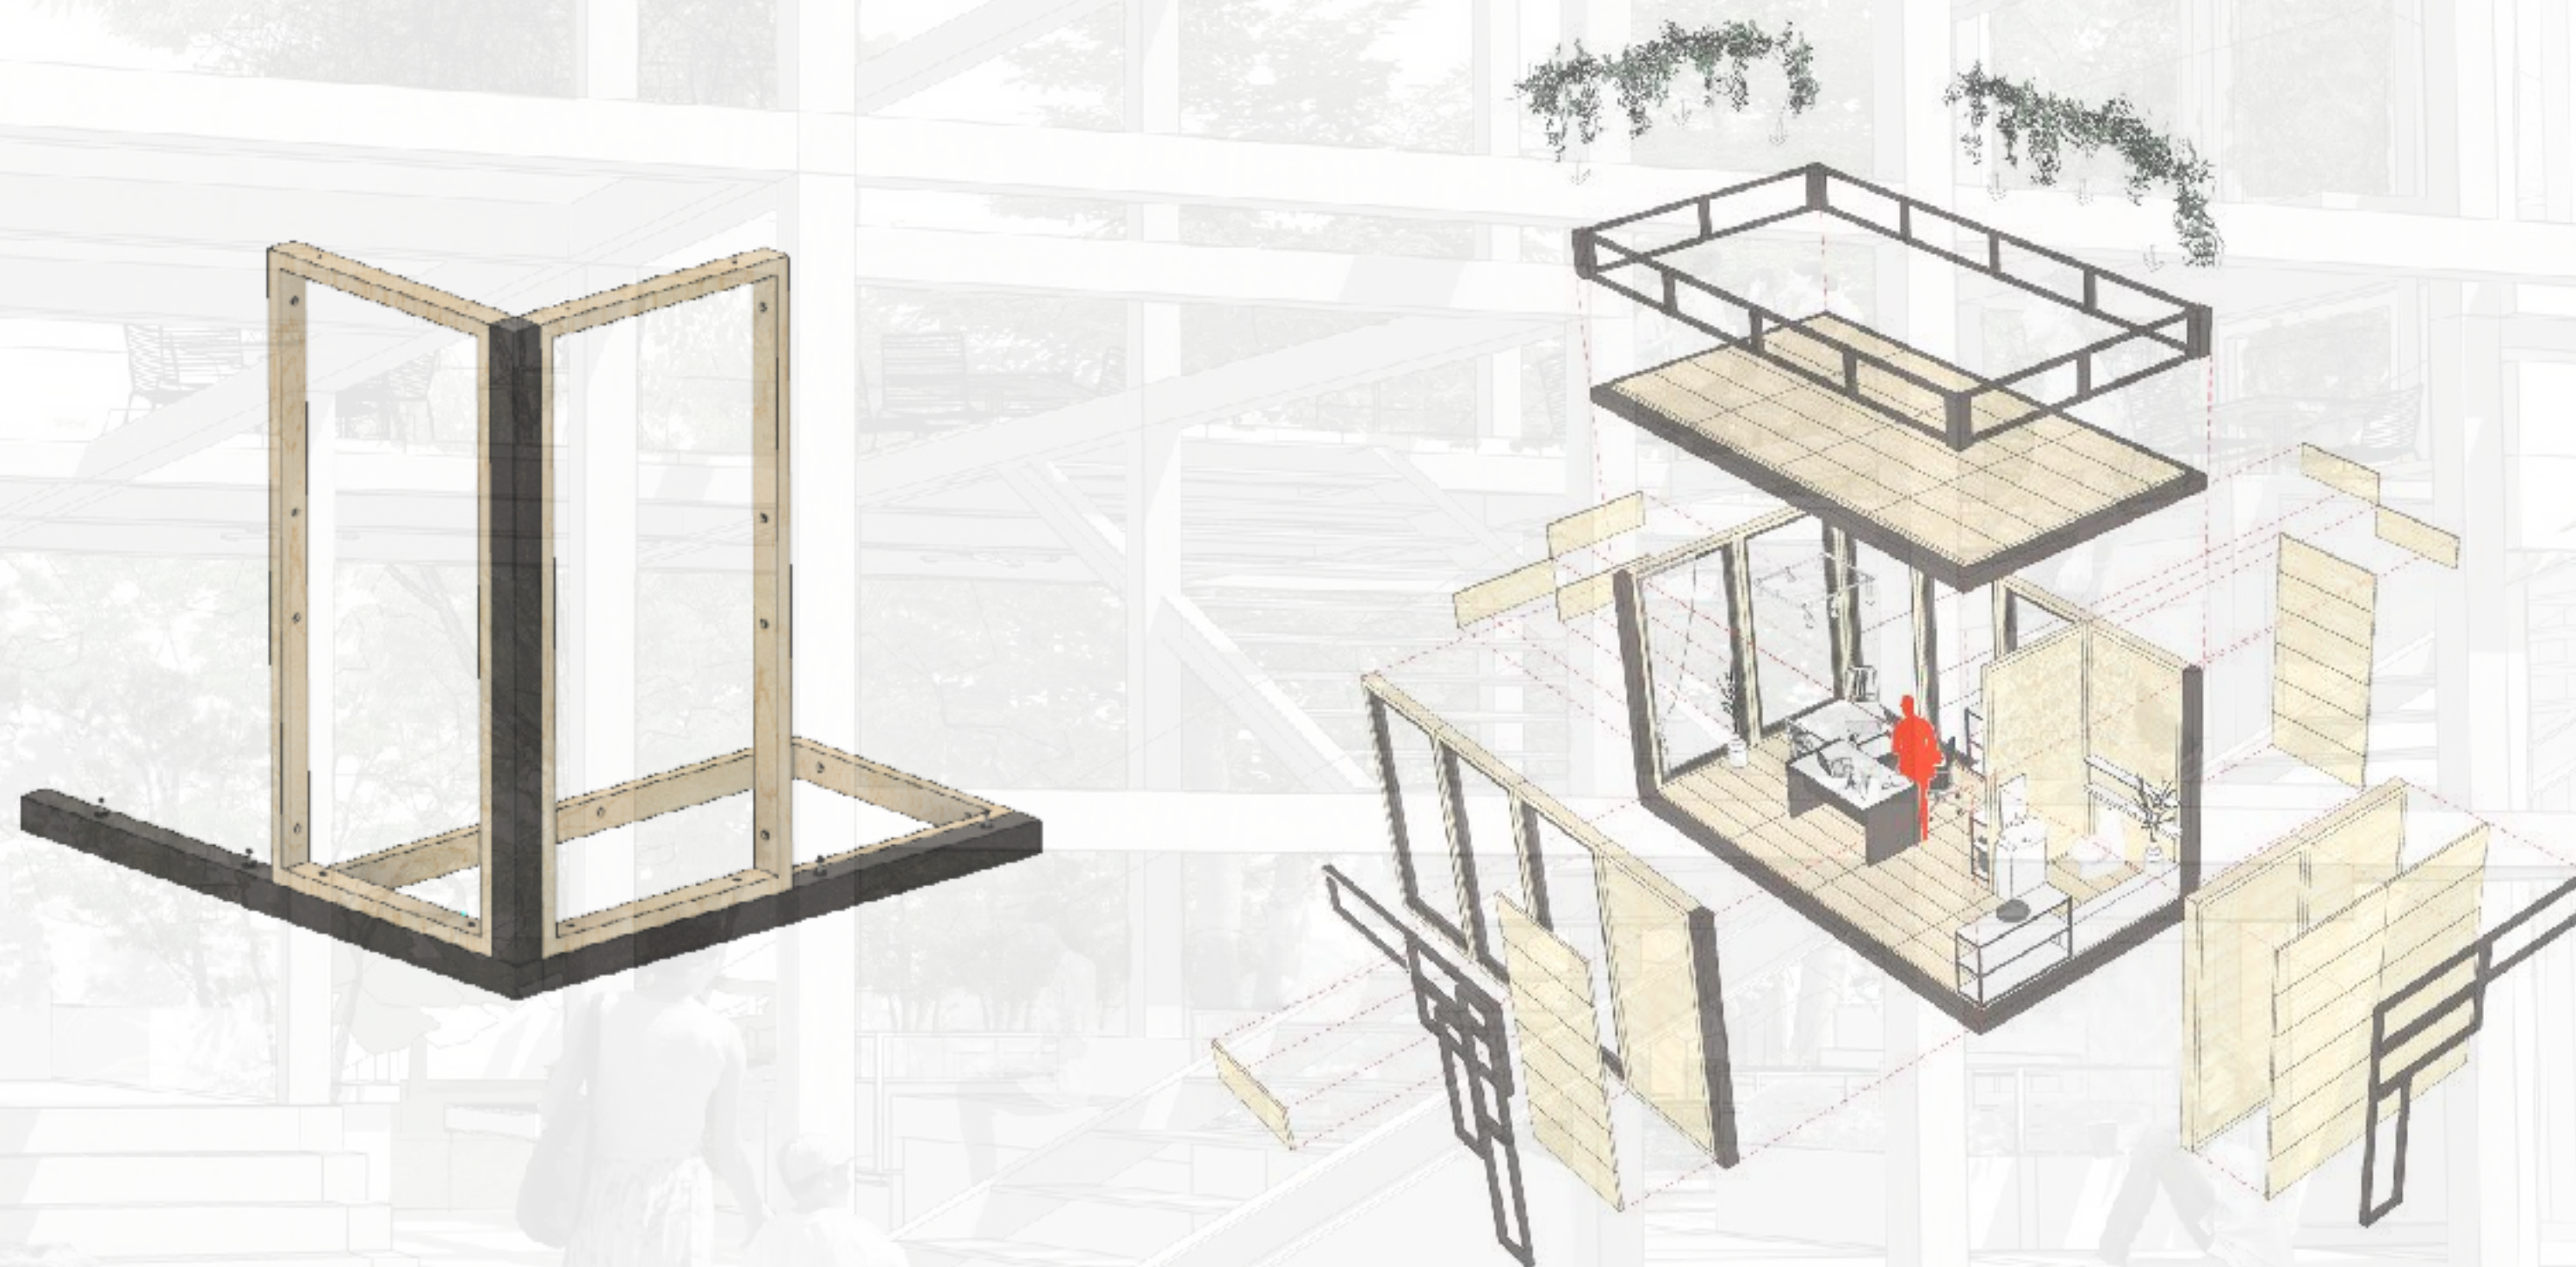

BBB short for Basic Building Blocks was inspired from a quest to revolutionise the way we experience living. We are in a world where people are no longer tied to one country, city or continent - more and more we are becoming world travellers, seeking new adventures, careers and leaving our homelands in search for 'something more'.

The ability to adapt the size, style and location allows you to break free from the burden of traditional living and gives you the autonomy to build your home/office to a size of your choice, where you want, with minimal effort and bureaucracy.

About BBB

BBB/elements are designed in the way that they could be connected or joined in any combination in the plane, in three dimensions and in angle positions regardless of the side of the connection. Inside/Outside orientation matters only.

Our unique cutting edge technology allows you to create a home or workplace that fits your requirements at any given time in your journey of life.

BBB: take an advantage!

- **BBB living and business solutions are suitable for every climate and for any location in the EU and beyond.**
- **High quality of living standards. Spacious and natural.**
- **Keep the value: resize, relocate, store or sell. Trade-in options.**
- **Comfortable, practical, low running costs.**
- **High mobility.**
- **Easy to deal with.**
- **Off-grid options.**
- **DIY. The final shape is at the decision of the customer.**

Features

Top of the line.

Superior level of comfort with 2.95m ceilings creating a spacious. Natural materials.

All season.

BBB structures are designed for all seasons and all climates within the EU including the Alps area. For the colder regions of Norway, Sweden, Denmark and Finland BB(XX)W option is available with enhanced thermal insulation.

Low running costs.

In the European Alps region we've calculated that heating costs for the BB20 (tourist edition) consumes about 180 EUR per month during the winter season- an off-grid edition will have no or very minimal costs for heating.

Low bureaucracy.

Unlike traditional buildings/ houses, BBB structures require minimal permits and the majority of EU governments and local municipalities are very accommodating to BBB structures.

Resizable.

BBB is a modular concept so it can be made bigger or smaller before or after installation. It all depends on the customers' requirements at that point in time.

No heavy machinery needed.

The assembling of a BBB house does not require heavy machines or lifting mechanisms. Mounting could be performed by a few people.

Features

Affordable.

Ease of assembly, along with automated process keeps labor costs at a minimum subsequently resulting in an affordable price model.

Environment friendly.

When installed as instructed, BBB structures do not harm their surroundings in any way. In the case of relocation, they leave no traces behind causing zero harm to the environment. BBB structure consist of natural materials namely; laminated timber, plywood, wood planking, mineral wool, eco vapour membranes.

Versatile.

BBB technology brings versatility to build a variety of structures ranging from a BB20 cabin, a BB40 lodge to multi-storey buildings and complete development settlements.

Relocatable.

BBB construction could be disassembled and transported over and over again by a regular truck and reassembled in a new location.

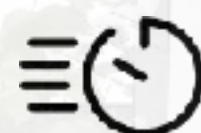

All purpose.

BBB structure have many use cases. Some could be living, tourism, business, public areas but the possibilities are endless.

No foundation needed.

BBB constructions are easily installed on the screwed pile base included in BBB contents of delivery. No concrete or any other type of foundation is required.

Easy, quick and DIY.

BB20 could be fully installed by 4 people in 1 or 2 days with a simple set of tools and BBB wrench (included)

Off-grid option.

BBB team is working on delivering solar and wind off-grid energy supply units as well as water and sewage facilities, this stand-alone product will be for our housing solutions as well as for third party use.

Custom design.

Any size any shape. From a stand-alone building to a settlement.
